Motivation & Hypothesis

Hypothesis: Public sentiment towards AI have become more positive after GenAI

- After the launch of ChatGPT, there has been a surge in popularization of AI tools
- Use sentiment analysis models to categorize text

ChatGPT

Datasets

Pre Gen-AI Dataset (2017 - 2021)

- Harvard Dataverse
- Text based tweets + metadata
- 893,076 Samples

Tweet Count Over Time

Post Gen-AI Dataset (2022 – 2023)

- Github Repository
- Text based tweets + metadata
- 56,221 Samples

Number of Tweets Over Time

Datasets

Pre Gen-AI Dataset (2017 - 2021)

- Harvard Dataverse
- Text based tweets + metadata
- 893,076 Samples

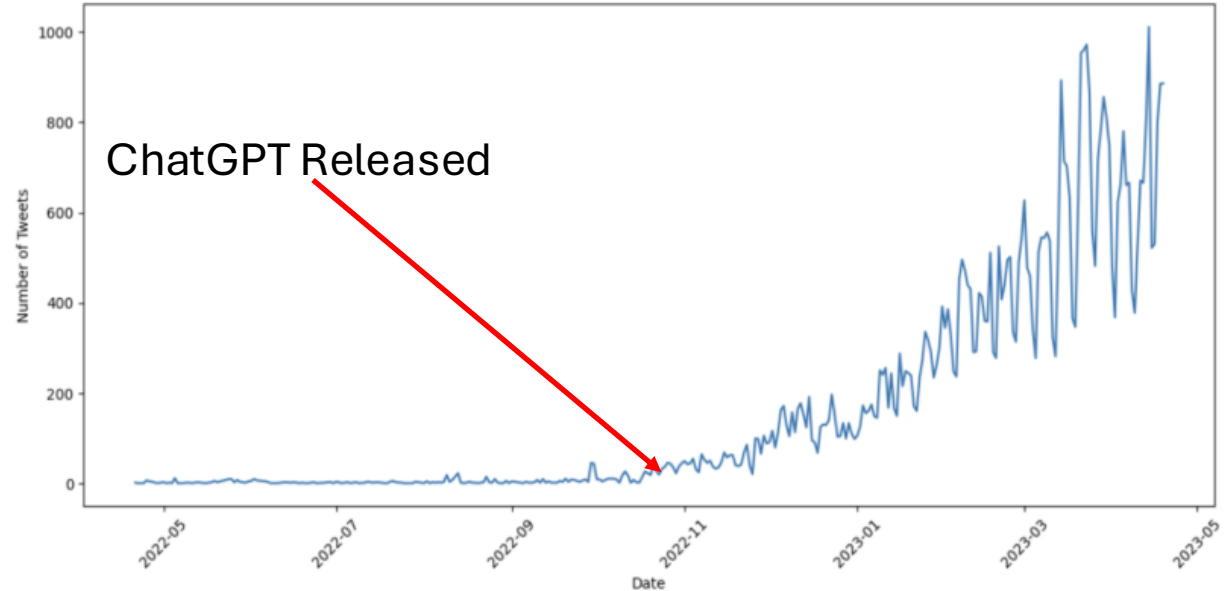

Tweet Count Over Time

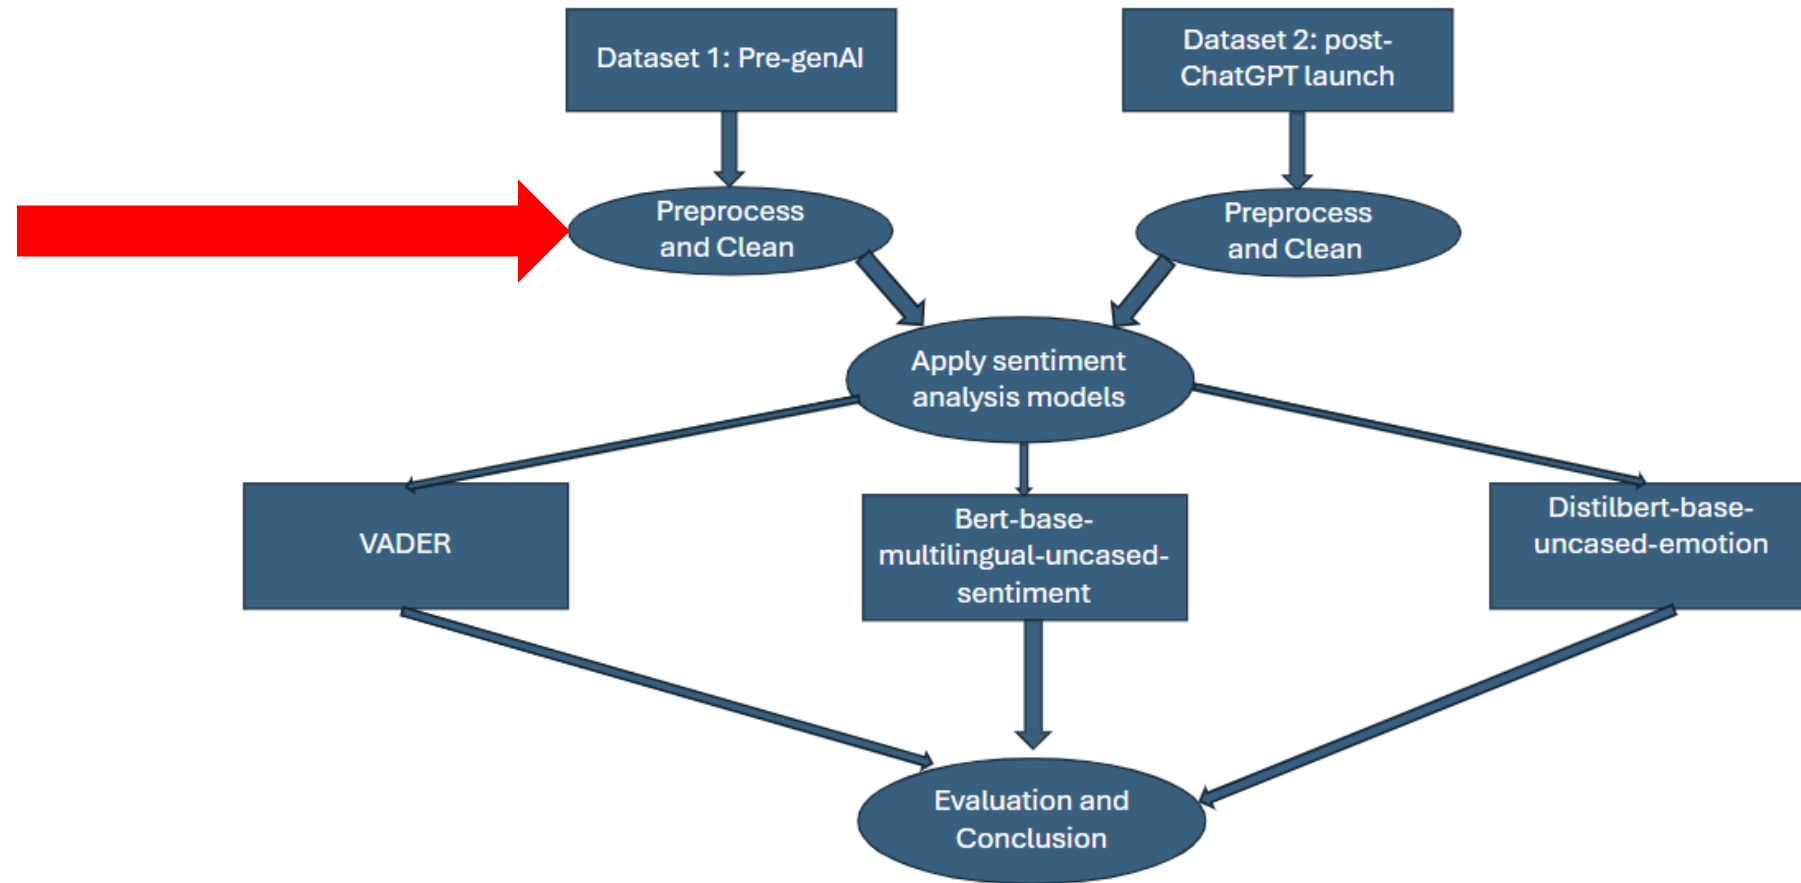

Post Gen-AI Dataset (2022 – 2023)

- Github Repository
- Text based tweets + metadata
- 56,221 Samples

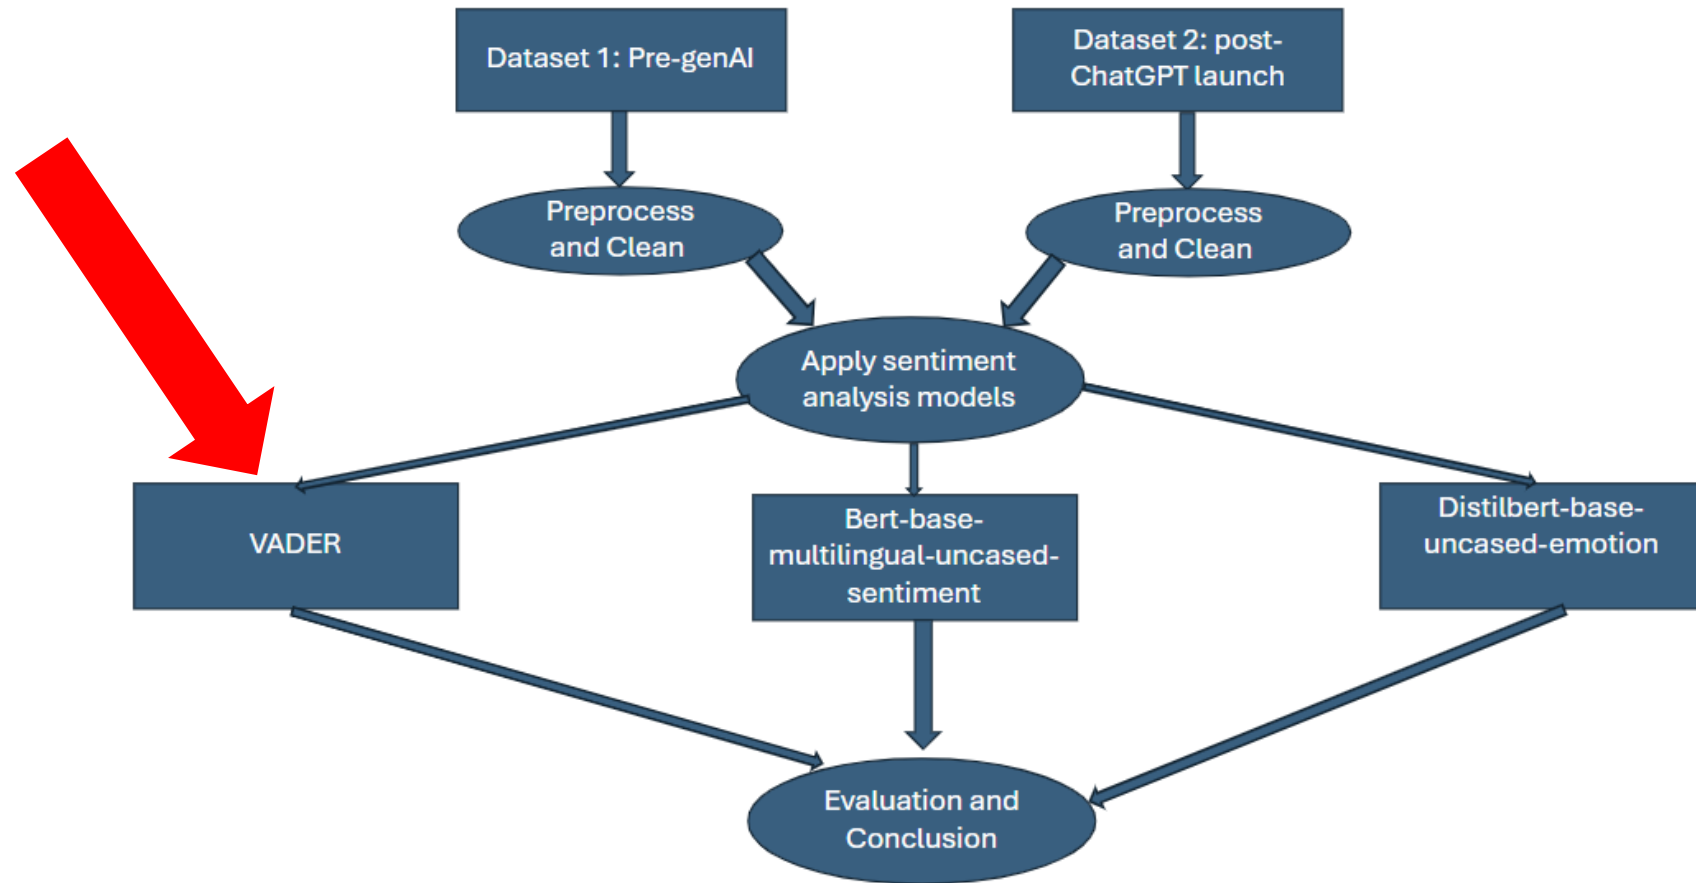

Number of Tweets Over Time

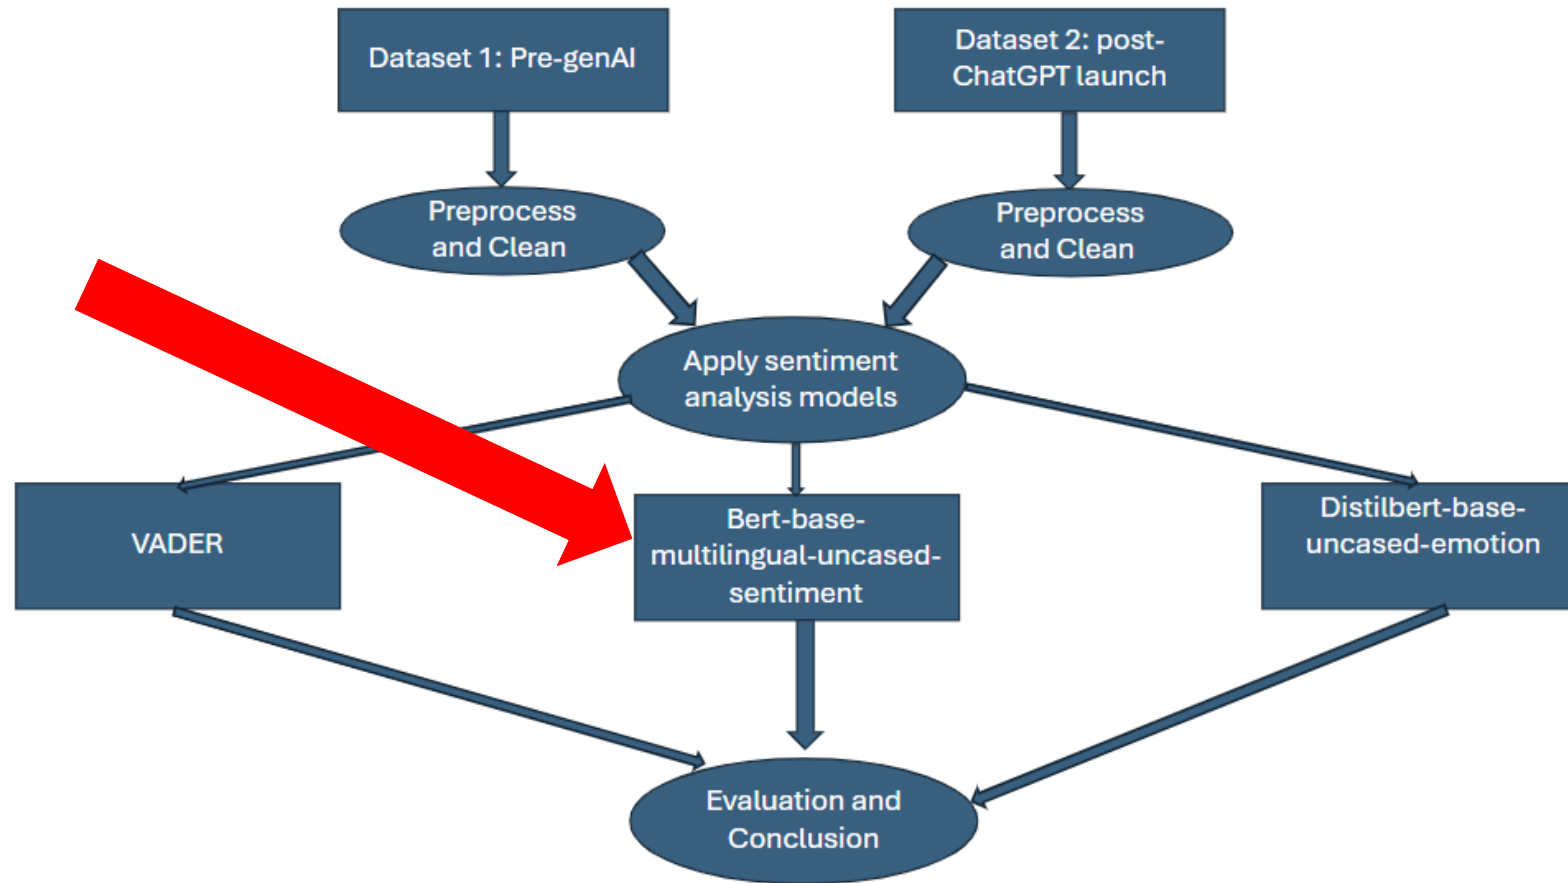

Analysis Plan

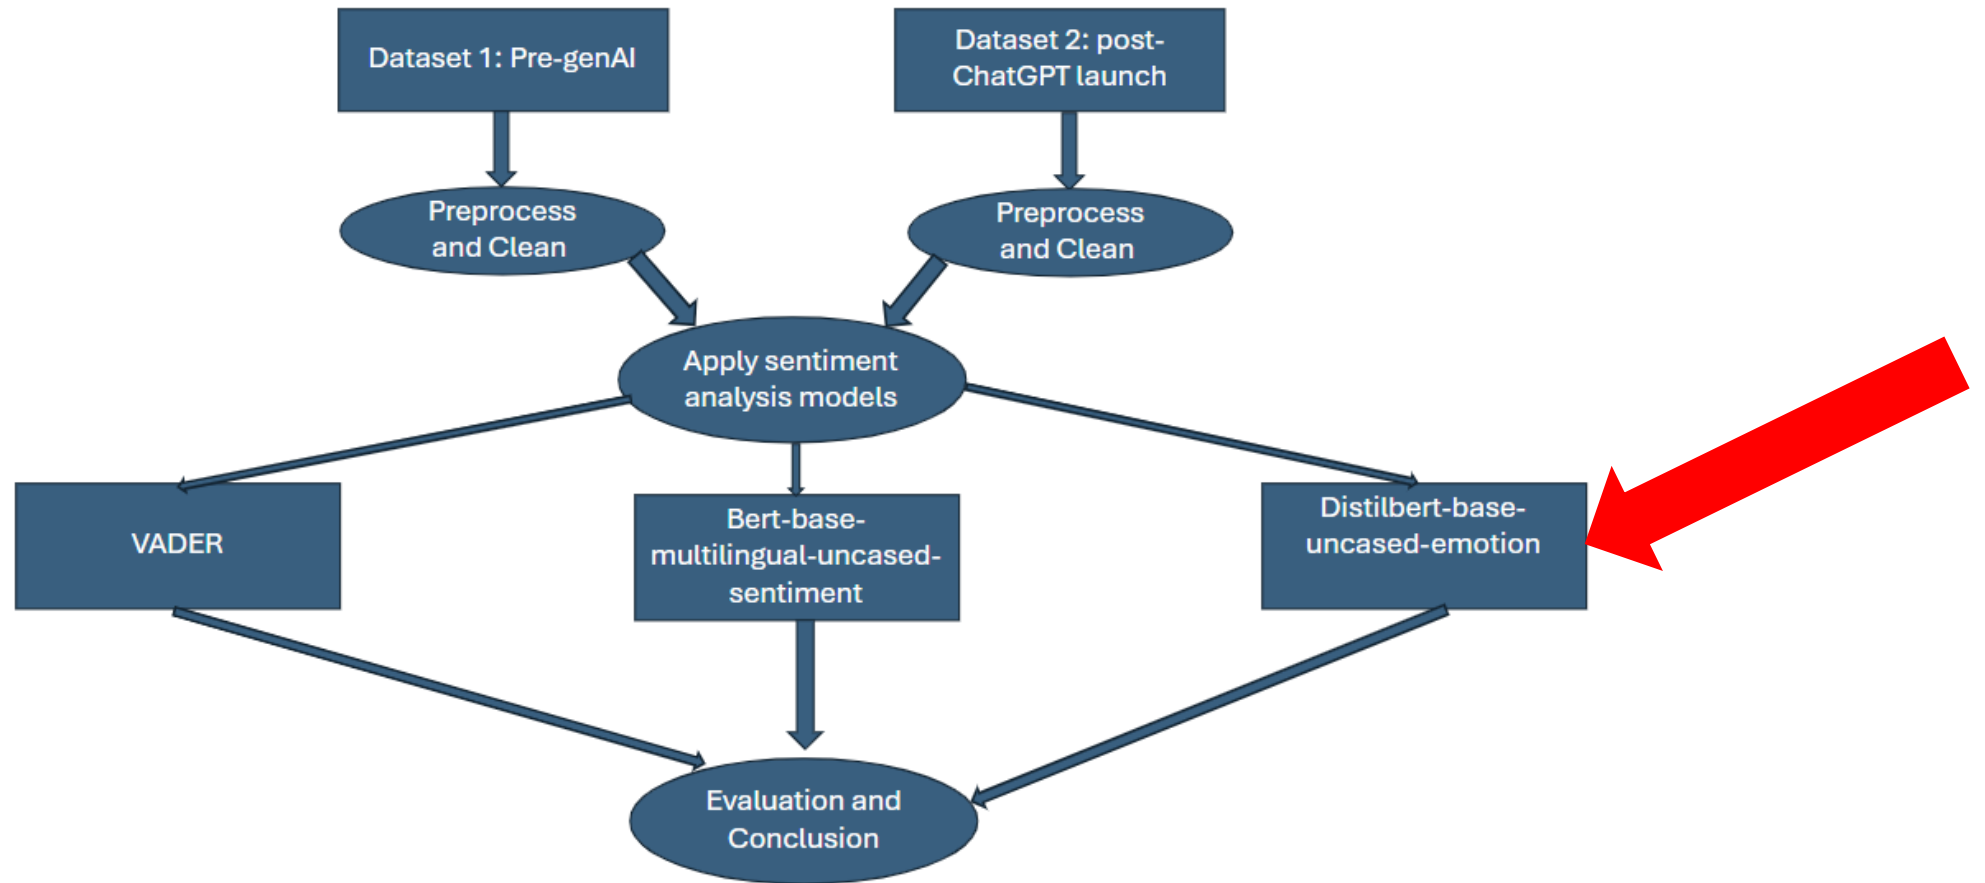

Analysis Plan

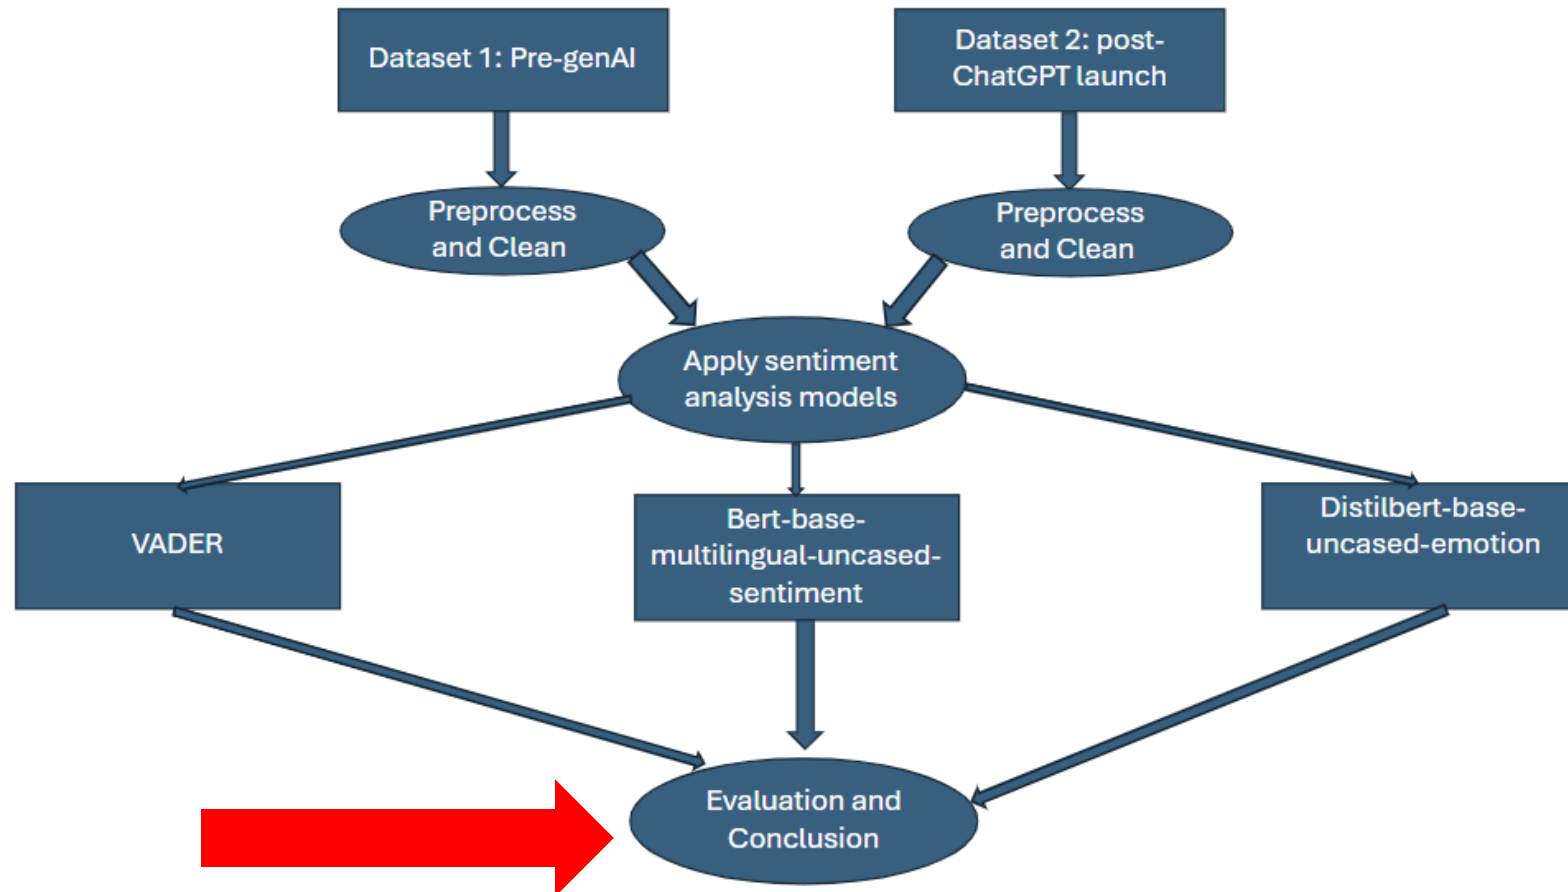

Analysis Plan

Analysis Plan

Analysis Plan

Tricky Analysis Decision

- Categorizing emotions as positive or negative
- Deciding which models to use

Bias and Mitigation

- **Bias**

- Twitter are not a representation of the whole population
- Social media posts are usually polarized
- Model training data

Bias and Mitigation

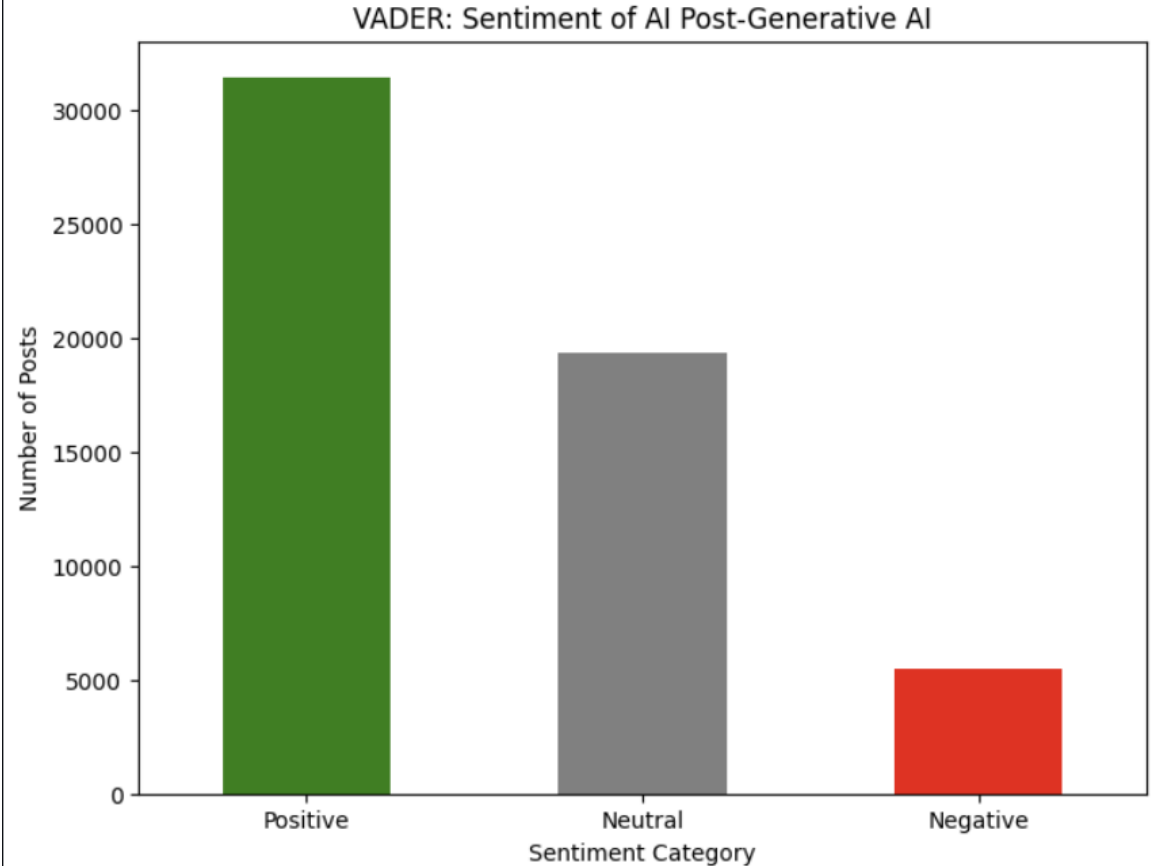

- Bias
 - Twitter are not a representation of the whole population
 - Social media posts are usually polarized
 - Model training data
- **Mitigation**
 - Using multiple models trained on diverse data and methods
 - Comparing aggregated results

Pre GenAI

Post GenAI

Next Steps

- Expand dataset to more media
- Apply fine-tuned models for better accuracy
